Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

1. $R_{\theta JA}$ is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. $R_{\theta JC}$ is guaranteed by design while $R_{\theta CA}$ is determined by the user's board design. a) 380°C/W when mounted on a minimum pad.

2. ESD values are in typical, no over–voltage rating is implied, ESD CDM zap voltage is 2000 V maximum. 3. Pulse test: pulse width \leq 300 ms, duty cycle \leq 2.0%.
