

## MOSFET

#### 600V CoolMOS™ SJ S7A Power Device

IPDQ60R040S7A is a high voltage power MOSFET, designed as static switch according to the superjunction (SJ) principle pioneered by Infineon Technologies.

IPDQ60R040S7A combines the experience of the leading SJ MOSFET supplier with high class innovation enabling low R<sub>DS(on)</sub> in QDPAK package. The S7A series is optimised for low frequency switching and high current application like circuit breakers.

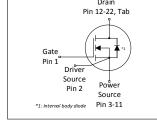

# PG-HDSOP-22

# **Features**

- Optimized for low switching frequency in high-end applications (circuit breakers and diode paralleling/replacement in bridge rectifiers).
- S7A technology enables best in class R<sub>DS(on)</sub> in smallest footprint.
- Kelvin Source pin improves switching performance at high current.
- QDPAK (PG-HDSOP-22-1) package is MSL1 compliant, total Pb-free and suitable for standard PCB assembling flow.

- S7A enabling low  $R_{\text{DS(on)}}$  for high constant current.
   Increased performance by using MOSFET instead of diode in the application (e.g. synchronous rectification).
- S7A can reach  $40m\Omega$  in a compact footprint.
- Reduced parasitic source inductance by Kelvin Source improves stability for extreme high current handling and ease of use due to less ringing.
- Improved thermals enable SMD QDPAK package to be used in high current designs.

## Potential applications

Circuit breakers (HV Battery disconnect switch, DC and AC low frequency switch, HV E-fuse) and diode paralleling/replacement for high power/performance applications.

#### Product validation

Qualified according to AEC Q101

Please note: The source and sense source pins are not exchangeable. Their exchange might lead to malfunction. For paralleling 4pin MOSFET devices the placement of the gate resistor is generally recommended to be on the Driver Source instead of the Gate. For production part approval process (PPAP) release we propose to share application related information during an early design phase to avoid delays in PPAP release. Please contact Infineon sales office.

Table 1 **Key Performance Parameters** 

Parameter	Value	Unit

Thermal resistance, junction - ambient	R <sub>thJA</sub>	-	-	62	°C/W	device on PCB, minimal footprint
Thermal resistance, junction - ambient for SMD version		-	45	55	°C/W	Device on 40mm*40mm*1.5mm epoxy PCB FR4 with 6cm² (one layer, 70µm thickness) copper area. Tap exposed to air. PCB is vertical without air stream cooling.
Soldering temperature, reflow soldering allowed	T <sub>sold</sub>	-	-	260	°C	reflow MSL1

### 3 Electrical characteristics

at T<sub>i</sub>=25°C, unless otherwise specified

#### Table 4 Static characteristics

The CoolMOS mentioned in this datasheet shall not be operated in linear mode.

For any questions in this regard, please contact Infineon sales office.

For applications with applied blocking voltage >70% of the specified blocking voltage, it is required that the customer evaluates the impact of cosmic radiation effect in early design phase and contacts the Infineon sales office for the necessary technical support by Infineon

Davamatar	Cumbal	Values			11!4	Nata / Tank One distant

## **Table 5** Dynamic characteristics

External parasitic elements (PCB layout) influence switching behavior significantly.

Stray inductances and coupling capacitances must be minimized.

For layout recommendations please use provided application notes or contact Infineon sales office.

Parameter.	0	Values			11		
Parameter	Symbol	Min.	Тур.	Max.	Unit	Note / Test Condition
