

# AOT2502L/AOB2502L

150V N-Channel MOSFET

### **General Description**

Trench Power MV MOSFET technology

• Low R<sub>DS(ON)</sub>

Low Gate Charge

Optimized for fast-switching applications

### **Product Summary**

 $V_{DS}$  150V  $I_{D}$  (at  $V_{GS}$ =10V) 106A

 $R_{DS(ON)}$  (at  $V_{GS}$ =10V) < 11m $\Omega$  (10.7m $\Omega$ \*)

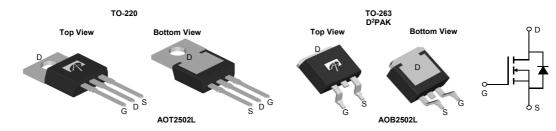

## **Applications**

Synchronous Rectification in DC/DC and AC/DC Converters

Industrial and Motor Drive applications

A. The value of  $R_{BJA}$  is measured with the device mounted on  $1 in^2$  FR-4 board with 2oz. Copper, in a still air environment with  $T_A$  =25° C. The Power dissipation P<sub>DSM</sub> is based on R <sub>tuA</sub> t≤ 10s and the maximum allowed junction temperature of 150° C. The value in any given application depends on the user's specific board design, and the maximum temperature of 150° C may be used if the PCB allows it.

B. The power dissipation  $P_D$  is based on  $T_{J(MAX)}$ =150° C, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Single pulse width limited by junction temperature  $T_{J(MAX)}$ =150° C.

D. The  $R_{\text{BJA}}$  is the sum of the thermal impedance from junction to case  $R_{\text{BJC}}$  and case to ambient. E. The static characteristics in Figures 1 to 6 are obtained using <300 $\mu$ s pulses, duty cycle 0.5% max.

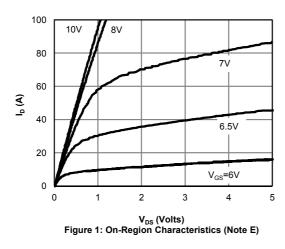

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of  $T_{J(MAX)}$ =150° C. The SOA curve provides a single pulse rating.

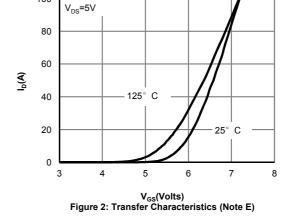

G. The maximum current rating is package limited.

H. These tests are performed with the device mounted on 1 in<sup>2</sup> FR-4 board with 2oz. Copper, in a still air environment with T<sub>A</sub>=25° C.
